The Hidden Secrets of Volume Revealed in the Price Charts – Volume Spread Analysis
Why I Wrote This Book

Trading in the Shadow of the Smart Money

Gavin Holmes

In 2002, Gavin Holmes had the good fortune to meet Tom Williams, a former syndicate trader who in his early years had traded with one of the largest stock trading funds in America at that time.

Tom subsequently wrote two books, “The Undeclared Secrets that Drive the Stock Market” and “Master the Markets”, which are read by more than 100,000 traders and investors worldwide.

Gavin was introduced to the books, the author, and at their first meeting, Tom explained that the markets were being manipulated on a daily basis by the “Smart Money”.

Tom Williams had been a “Smart Money” insider, and later developed trading system software to discern the activity of the “Smart Money” manipulation of the markets. www.tradeguider.com

Gavin later became a Williams protégé and since 2001 has become recognized as a leading expert in market manipulation and the Volume Spread Analysis methodology. His passion is to enlighten those traders and investors who have no idea of the inner workings of the markets. He has also built upon the pioneering work of Richard Demille Wyckoff, Richard Ney, and Tom Williams.

PRESENTING: The Secret Trading Strategy From The 1930s That Hedge Funders Don't Want You To Know About

Matthew Boesler  |  Feb. 14, 2013, 5:36 PM  |  223,505  |  62

“The large operator does not, as a rule, go into a campaign unless he sees in prospect a movement of from 10 to 50 points. Livermore once told me he never touched anything unless there were at least 10 points in it according to his calculations.”

So writes Richard Wyckoff, the legendary trader who in the 1930s wrote a manifesto that gained him a cult following on Wall Street.
Even in 2013 – Hedge Fund Managers Swear By It!!

"The large operator does not, as a rule, go into a campaign unless he sees in prospect a movement of from 10 to 50 points. Livermore once told me he never touched anything unless there were at least 10 points in it according to his calculations."

So writes Richard Wyckoff, the legendary trader who in the 1930s wrote a manifesto that gained him a cult following on Wall Street.

His 1931 book, "The Richard D. Wyckoff Method of Trading and Investing in Stocks — A Course of Instruction in Stock Market Science and Technique," is out of print and somewhat difficult to find these days (not impossible), but even in 2013, hedge fund managers still swear by it.

One of the key takeaways from the book is that if you want to succeed, you have to learn to recognize the professionals and understand what they are doing. That's what those who follow Wyckoff do — they watch the large operators.

Wyckoff walks us through the process of how a large operator will manipulate a stock up or down — so that next time one sees it unfolding on the screen before his or her own eyes, he or she can react accordingly.
The Masters & Teachers of the Wyckoff Method & Volume Spread Analysis

Tom Williams

Richard Wyckoff
Richard Demille Wyckoff (November 2, 1873 – March 19, 1934) was a stock market authority, founder and onetime editor of the *Magazine of Wall Street* (founding it in 1907), and editor of *Stock Market Technique*.

"...Thousands of those who operate in the markets now recognize the fact that the market momentarily indicates its own immediate future, and that these indications are accurately recorded in the market transactions second by second, and therefore those who can interpret what transactions take place second by second or moment by moment have a distinct advantage over the general trading public...."

*Richard D Wyckoff, 1914*

What Is Volume Spread Analysis
Most traders are aware of the two widely known approaches used to analyze a market—fundamental analysis and technical analysis. Many different methods can be used in each approach, but generally speaking, fundamental analysis is concerned with the question of why something in the market will happen, and technical analysis attempts to answer the question of when something will happen. *Volume Spread Analysis*, however, is a third approach to analyzing a market. It combines the best of both fundamental and technical analysis into a singular approach that answers both questions of 'why' and 'when' simultaneously.
At its core, Volume Spread Analysis or VSA is a methodology based on the original works and teachings of Richard D Wyckoff, a trader in the early 1900’s. The methodology seeks to establish the “cause” of price movement on a chart. The “cause” is simply the imbalance of supply and demand as the market trades, resulting in strength or weakness in the market being charted.
For the correct analysis of volume, you need to understand that the recorded volume contains only half the knowledge required for a correct analysis. The other half of the knowledge is found when observing the spread (or range) of the price bar and the closing price on that bar. Volume indicates the amount of activity on the price bar and the spread or range of the bar shows what the price actually did, and most importantly where the price finally closed.
Volume – Spread or Range of Bar and Closing Price
How Can Volume Spread Analysis Identify These Moves?

Volume = Activity

We are interested in volume because it tells us the consensus of opinion amongst the “Smart Money”

Gold Price Collapses 2013 and 2014

Gold price falls below $1,200 an ounce

Gold has continued its drop, falling to its lowest level in almost three years, after the US Federal Reserve said it could wind down its stimulus programme.

Gold fell to $1,191.21 an ounce in Asia trade, after breaching the $1,200 mark in New York on Thursday for the first time since August 2010.

The US Fed said last week that its bond purchases would start to "taper off" in coming months if the economy recovers.

Analysts said investors had been anticipating further price falls.

As a result there was a sell-off, resulting in a big drop in prices in recent days.

"You don't want to catch a falling knife, so people who might be buyers are stepping aside and don't want to show gold at their quarter-end statement," said Paul Minchella at the BullionVault in London.
